## Quick Guide for HOTSPOT Access

(for Windows XP Users)

Please confirm it beforehand!

### Windows Users

- Is wireless LAN card driver installed? If it's not, install it following the installation guide of Wireless LAN card.
- Is wireless LAN card inserted firmly to your laptop? Confirm wireless LAN card inserted firmly to PC.
- Enable wireless LAN function by turning on the switch when using laptop/PDA with built-in wireless LAN card. Please see your PC/PDA user guide for details.

#### STEP-1

Wireless LAN  
Configuration

#### STEP-2

Login at Service  
Areas

#### STEP-3

Logout

#### Troubleshooting

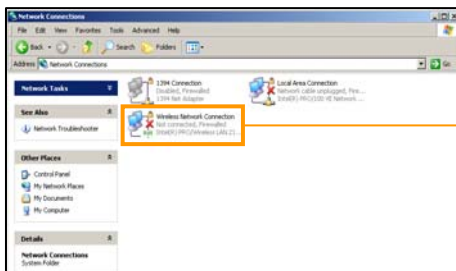

#### STEP-1

### Wireless LAN Configuration

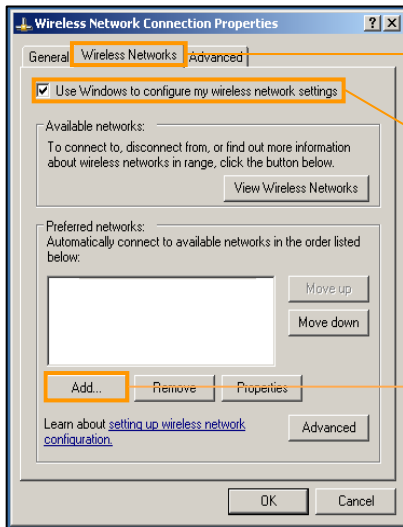

1 Select **Control Panel** from **Start** menu.

2 Double-click **Network Connections**.

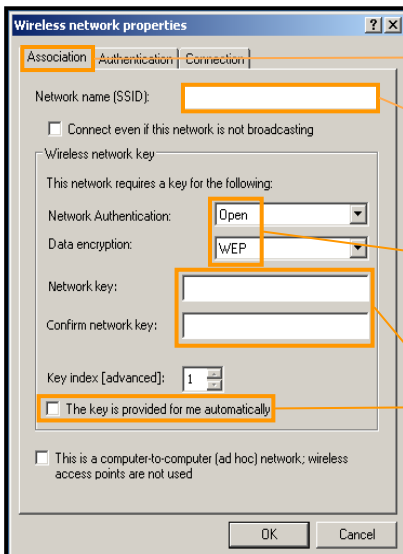

3 After **Network Connections** window appears, right-click **Wireless Network Connection** and select **Properties**.

4 After **Wireless Network Connection Properties** window appears, select **Wireless Networks** tab.

5 Check "Use Windows to configure my wireless network settings".

6 Click **Add** button.  
 ※ The window for SP2 is slightly different, from the left picture.

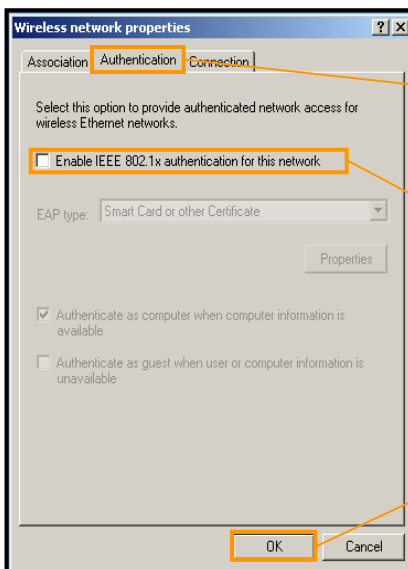

7 After **Wireless network properties** window appears, select **Association** tab.

8 Input ESS-ID in **Network name (SSID)** : as notified at the registration.

9 Select **Open** in **Network Authentication**.  
 Select **WEP** in **Date Encryption**.

10 Uncheck "The key is provided for me automatically".

11 Input WEP key in **Network key** : and **Confirm network key** : as notified at the registration.

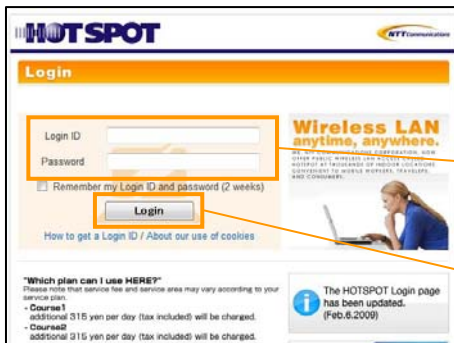

12 Select **Authentication** tab.

13 Uncheck "Enable IEEE 802.1x authentication for this network."

14 Click **OK** button.

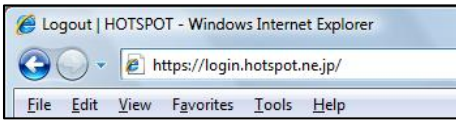

**Wireless LAN Configuration is completed.**

The screenshot shows the HOTSPOT login interface. At the top left is the 'HOTSPOT' logo and the NTT Communications logo. Below the logo is a 'Login' header. The main content area contains a login form with fields for 'Login ID' and 'Password', a checkbox for 'Remember my Login ID and password (2 weeks)', and a 'Login' button. To the right of the form is a promotional banner for 'Wireless LAN anytime, anywhere.' Below the form, there are links for 'How to get a Login ID / About our use of cookies'. At the bottom left, there is a section titled '\*Which plan can I use HERE?' with details for 'Course1' and 'Course2'. At the bottom right, there is an information icon and a note: 'The HOTSPOT Login page has been updated. (Feb.6.2009)'.

- 1 Start up your Web Browser.
- 2 After the login page appears, enter your **Login ID** and **Password**.
- 3 Click the **Login** button.

**Login is completed.**  
**Enjoy broadband internet access from HOTSPOT.**

- 1 Please enter "http://logout.hotspot.ne.jp" in the address bar of your web browser.

- 2 The logout window is displayed. Then click the **Logout** button.

- 3 A confirmation message is displayed after your logout is completed.

**Logout is completed.**

### Attention!

- ⦿ You'll be logged out automatically within a few minutes after you go out of wireless coverage or power off your laptop/PDA.
- ⦿ Please note that you will be charged until you are logged out by system (or by pressing logout button) if you subscribe measured rate service such as OPEN Plan Light or Global Broadband Roaming Services (GBRS) , etc.

## Case: Can't open Login Page

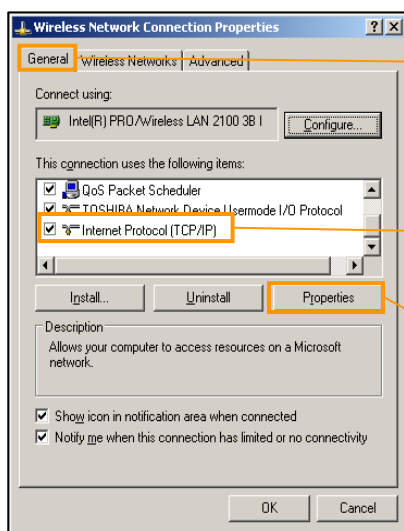

I have configured Wireless LAN settings and opened web browser, but HOTSPOT Login Page didn't appear.

Check the followings configuration.

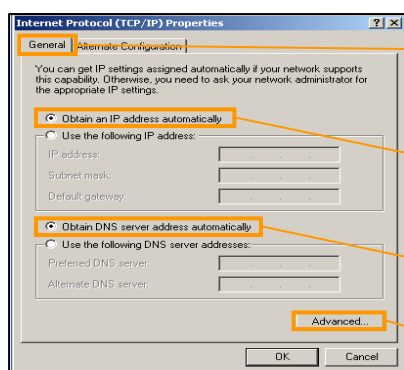

- a. Network Configuration -> See below for details
- b. Web Browser Settings -> See below for details

Did this topic help you to resolve the issue? If no, please call : HOTSPOT Customer Support.

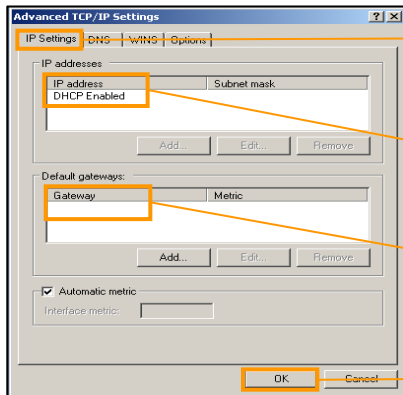

### a. Network Configuration.

- 1 Select **General** tab in **Wireless Network Connection Properties** window.
- 2 Select **Internet Protocol (TCP/IP)**.
- 3 Click **Properties** button.

- 4 After **Internet Protocol (TCP/IP) Properties** window appears, select **General** tab.
- 5 Select "Obtain an IP address automatically".
- 6 Select "Obtain DNS server address automatically".
- 7 Click **Advanced...**button.

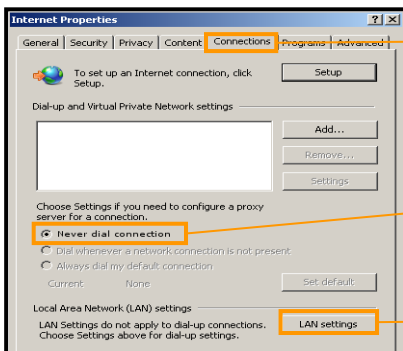

- 8 After **Advanced TCP/IP** Setting window appears,select IP Setting tab.
- 9 Confirm **IP address** field is **DHCP Enabled**.
- 10 Confirm **Gateway** field is empty. If not, delete it.
- 11 Click **OK** button in this window and all previously opened windows.

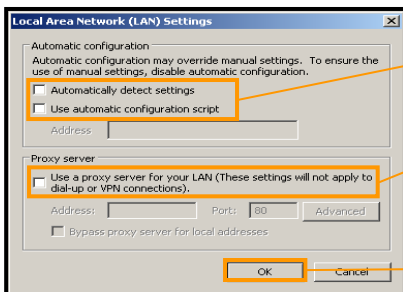

**Check Network Configurations is completed.**

## b. Web Browser Settings

✳️This part is specific to Internet Explorer.

- 1 Right-click the icon of internet explorer and select **properties**. (or start up Internet Explorer and select **Internet Options...** on **Tool** menu.)
- 2 After **Internet Properties** (or **Internet Options**) window appears, select **Connection** tab.
- 3 Select **Never dial connection**.

- 4 Click **LAN Settings...**button.
- 5 After **Local Area Network (LAN) Settings** window appears, uncheck all the checkboxes of **Automatic configuration** and **Proxy server**.
- 6 Click **OK** button in this window, and **Internet Properties** window.

**WEB browser settings is completed**
